

Cleaning systems

Advantages

Efficiency:

The cleaning sequence is fully automatic so that time-consuming manual work is reduced to a minimum.

The dispensing time and the rinsing time can be controlled separately and individually adapted to each area of the equipment.

Maximum hygiene:

The system can be cleaned with either cleaning agents or disinfectants.

The cleaning sequence is performed and monitored by the system controls.

Easy operation:

In order to perform the cleaning process, only the canister with the cleaning agent concentrate is placed below the cleaning equipment and the suction hose is inserted.

Variable:

The cleaning equipment can be used as a central cleaning system for several systems.

Characteristics

	RG-A2.5	RG-A8
For maximum system sizes (incl. KR)	up to 4 trolleys	from 4 trolleys
For maximum number of systems	1-4	more than 4
Water pressure / Pressure pump	5 bar (by design) pressure pump optional	- / including standard pressure pump
Foam cleaning	optional	optional
Cleaning program	automatic	automatic
Parallel cleaning of several systems	not possible	not possible
MOCAN controls for intelligent (serial) cleaning of several systems	optional	optional
Location	firmly attached to an adjacent wall	firmly attached to an adjacent wall
